

## Technical Translation

Use of the correct terminology is the key to technical translation and localization. When translating technical documents, user and service manuals, technical training materials, automotive and aircraft manuals, we always use specialists in the subject matter and highly experienced technical translators as primary translators. The translated technical documents are then edited and proofread by other specialized linguists to ensure quality, consistency, and coherence. We will be pleased to discuss what we can do to meet your technical translation needs. Please do not hesitate to contact us.
